Efficiency (9)

Friday Peak Hours

On Fridays, the 12pm–3pm slot represented a substantial portion of calls. Assign your most experienced agents to these hours for optimal conversion.

Saturday Busy Hours

For Saturdays last quarter, 11am–2pm showed elevated call activity. Take advantage of customer readiness by offering virtual tours or callbacks during this period.

Wednesday High-Traffic Window

On Wednesdays, between 11am and 2pm, hourly call shares were consistently strong. Schedule callbacks and deal-closure activities during these hours.

Deprioritize Mondays

Mondays had the lowest call share, at 10% last quarter. Schedule non-customer-facing work, such as training or meetings, in the early part of Mondays.

Prolonged Wednesday Engagements

Ninety-eight calls exceeding 15 minutes were logged on Wednesdays at 3pm (last quarter), indicating potential for deep engagement—assign specialized agents during this slot.

Ready and Early Possession is Key for Conversion

For PROJECT (54.9%, 2,208 out of 4,019), Island Cove (30.9%, 69 out of 223), and L&T Malad (75% within 2-3 Cr budget), timely or ready possession is a clear buying trigger in the last 3 months—regular project status updates and handover communications will directly address this critical efficiency and trust requirement.

Call Volume vs. Performance Efficiency

Across projects such as Island Cove and THE GATEWAY (March–July 2026), high call volume (e.g., Shifa Dalvi with 44–76 calls per period) has not correlated with high performance, with average conversion rates stuck around 40–51%. Conversely, one-off high performers like Hrigved Dubey (67%) and Jafar Sayyad (77–81% in single calls) underscore the importance of quality. Standardize quality audits and set clear conversion expectations, prioritizing call effectiveness over volume.

Underutilization and Minimal Engagement in Key Projects

In projects such as Omkar, Malad and Seawoods Grand Central – Navi Mumbai (last 6 months), only 1–4 relevant calls were made by sales teams, all with low or average performances (e.g., Bhavika Pitale at 30–54%; Rekha Koli at 40%). This low activity has led to limited conversions and no evidence of high-performing sales cycles. Set strict minimum call quotas and escalate accountability among salespersons to boost pipeline health.

Skill Gaps Identified in High-Volume, Low-Efficiency Projects

In Crestoria Estates (March–July 2026), Vaishnavi Chourasiya made 155 relevant calls in July, averaging only 45.43%, while underperformers Lakshmipriya Sahu and Hrigved Dubey remained below 44%. This significant skill gap requires immediate competency-based training focused on objection handling and consultative selling to bridge the performance divide within teams operating high-volume projects.

Agent (10)

Focus Friday Staffing

Fridays had the highest share of calls last quarter, accounting for 18% of total inbound volume in the 10am–8pm window. Schedule more agents and prioritize lead follow-up on Fridays.

Saturday Surge Preparation

Saturday was among the busiest days last quarter, with 16% of weekly calls. Ensure full team coverage on Saturdays, especially for property inquiries.

Midweek Opportunity

Wednesday contributed 15% of calls last quarter. Encourage midweek outbound activity, as customer responsiveness is elevated.

Longest Call Case

The longest recorded call last quarter lasted 27 minutes 37 seconds, occurring on Friday at 2:35pm. Review this call for quality assurance and agent training on handling complex queries.

Repeated Low Performers Across Multiple Projects

Salespersons Sakshi Utekar, Vaibhavi Rathod, and Rishi Sonara display a consistent pattern of low performance across several projects (e.g., Rejuve 360, Green Reserve, Seawoods Residences, Island Cove) from March to July 2026. Sakshi Utekar's average performance in July 2026 remained below 30% across 2-3 calls for multiple projects. Vaibhavi Rathod, while achieving a peak of 78% in 1 call for Rejuve 360 (July 2026), posted as low as 14.67% in Green Reserve (June 2026) and hovered at 34%-54% in other months. Rishi Sonara maintained averages below 40% for Green Reserve and frequently scored -1% (no conversion) on single calls in multiple projects including Seawoods Residences and Rejuve 360. Immediate intervention is needed with focused training and regular performance reviews to uplift these persistent underperformers.

Performance Gaps Between Top and Bottom Performers within Projects

In L&T REALTY EVARA HEIGHTS (July 2026), Sakshi Utekar handled 69 relevant calls with an average of 44.96% performance (Average), while low performers like Nancy Gupta, Devang Mistry, and Jafar Sayyad scored just 17.5%, -1%, and -1% across 1–2 calls. Focus on deploying the successful engagement tactics of top performers to the bottom tier, and enforce coaching for those repeatedly falling below a 30% threshold.

Frequent Fluctuations Among 'Average' and 'Good' Performers

Even top, high-volume performers show notable performance volatility. For instance, Vaishnavi Chourasiya on Seawoods Residences averaged between 47.5% (April), 61% (June), and peaked at 71.5% (July), while Nancy Gupta fluctuated between 65% and 60% over similar periods. Implement periodic best-practice knowledge-sharing, especially from months with peaks above 70%, to stabilize good performers closer to 'Excellent' benchmarks.

New Salespersons and Low Call Volume Lead to Subpar Results

Multiple new or low-activity salespersons, including Shivanggi Ratod and Akshay Anilkumar, repeatedly post negative or sub-35% performance in July–June 2026 across Vayam, Green Reserve, and Seawoods Residences. For example, Shivanggi had -1% on Vayam (July) and 37% on THE GATEWAY (June), while Akshay Anilkumar has multiple 25–36% calls. Mandate call minimums for new joiners and couple onboarding with shadowing high-performers.

Critical Role of Coaching for Persistent Low Performers

On THE GATEWAY project (March–July 2026), Shifa Dalvi logged 51 calls averaging only 41.07% performance, with the July average dropping to 40.5%. This pattern of persistent moderate-to-poor results across high call volumes signals that passive repetition is not leading to improvement. Immediate, structured one-on-one coaching and process reviews are required for such profiles to break the cycle of stagnation.

Mentorship and Best Practice Replication Needed for Scalable Uplift

Across multiple projects and periods (March–July 2026), sporadic 'Excellent' performers—such as Bhavika Pitale, Vaibhavi Rathod, and Nancy Gupta—recorded 70–80% performance rates on individual calls but were not utilized further in call volume or mentorship roles. Establish a process to formalize mentorship from these high achievers, extract best practices, and create rapid training sprints for underperformers.

Customer (8)

Consistent 2 BHK Demand Across Projects in ₹1–2 Cr Segment

Across PROJECT, L&T Realty Crestoria Estates, L&T Realty Vayam, and L&T Realty Ahana (last 3 months), there is a persistent preference for 2 BHK apartments in the ₹1–2 Cr range—Project: 35.1% (1,413 out of 4,019), Crestoria Estates: 18.3% (131 out of 714), Vayam: 22.6% (122 out of 541), and Ahana: ~83% of enquiries included 2 BHK within 2 Cr—demonstrating strong market traction and increased conversion potential for these value-driven segments.

3 BHK Units Dominate Enquiries in Key High-End Projects

Avinya Enclave (75.4%, 310 out of 411), Island Cove (88.3%, 197 out of 223), and Elara Celestia (81.5%, 798 out of 979) show a consistent and overwhelming preference for 3 BHK units over the last 3 months, making this configuration a best-seller in premium projects—inventory allocation and marketing should be prioritized towards 3 BHK layouts to maximize conversions across these projects.

Location is a Decisive Factor Across Projects

In Elara Celestia, 47.2% (462 out of 979) of leads preferred proximity to Phoenix Mall of Asia, while in PROJECT, 30.6% (1,230 out of 4,019) of leads were driven by location, and location/connectivity also accounted for 14% (100 out of 714) of L&T Realty Crestoria Estates leads. Leveraging local landmarks and infrastructure benefits in messaging significantly strengthens lead quality and conversion.

Budget Sensitivity Remains Core Trigger for Apartment Buyers

Across PROJECT, Elara Celestia, Island Cove, Elixir Reserve, L&T Realty Vayam, and Rejuve 360 in the last 3 months, the ₹1–2 Cr and ₹3–4 Cr segments repeatedly emerge as the most active: e.g., 35.1% (1,413/4,019) in PROJECT for 2 BHK in ₹1–2 Cr, 20.6% (46/223) in Island Cove for 3–4 Cr, and 60.9% (42/69) of Rejuve 360 leads focused on sub-1.5 Cr. Budget-based product packaging and transparent price communication are critical.

Investment-Focused Buyer Segment is Growing

In PROJECT (60.9%, 2,452 out of 4,019), Elara Celestia (68.9%, 674 out of 979), L&T Realty Vayam (20.7%, 112 out of 541), and L&T Realty Ahana (11.4%, 25 out of 219) over the last 3 months, a significant number of enquiries cited investment potential as their main motivation—messaging that highlights rental income, appreciation, and early possession will efficiently target this segment.

Top 3 Projects for Large-Format (1000+ sqft) Apartment Demand

Avinya Enclave leads with 24.8% (102 out of 411), Island Cove follows at 37.7% (84 out of 223), and Elara Celestia at 5% (49 out of 979) mentioned explicit preference for units larger than 1,000 sqft over the last 3 months—indicating that premium segment demand is strongest in Island Cove, which captures nearly two-fifths of its leads seeking large layouts.

Amenities & Brand Value: A Niche, But Highly Decisive Segment

Amenities are a primary trigger for a focused segment: Project (15%, 602 out of 4,019), L&T Realty Crestoria Estates (all 18 amenity queries, 100%), and Elara Celestia (1.4%, 14 out of 979) cited amenities such as clubhouses, pools, and gyms. Brand reputation was decisive in Crestoria Estates (100% of 16 brand-related leads) and Project (2%, 79 out of 4,019), showing that while smaller, these segments demand tailored, premium outreach.

Family-Centric Configurations Drive a Significant Share of Demand

Elara Celestia (32.4%, 317 out of 979 focused on family 3 BHKs), L&T Realty Crestoria Estates (21 out of 21 family-focused leads), and similar references in PROJECT indicate that marketing emphasizing family-friendly layouts, safety, and schools attracts a highly engaged buyer sector.
